

## Adelino's Kite General Instructions

Follow steps one through four to make a hook to attach your bridle line to your flying line. Remember you could also use a ring on the bridle line.

This kite flies well in light to moderate winds. If your kite seems to veer off to the right all of the time, move the flying line hook along the bridle so that the right bridle leg is longer than the left leg. If the kite veers to the left, make the left bridle leg longer. The hook should slide along the bridle with a bit of help.
